Installation	Seamless integration with existing systems

WELL LIGHT FIXTURES

QUICK INSTALL GUIDE

PRODUCT DIMENSION

INSTALLATION

- 1. Prep & Drainage:** Dig a hole 2" wider than the housing and add gravel for drainage.
- 2. Set Angle:** Place the housing in the ground, tilting the beveled base toward your target.
- 3. Lamp & Cover:** Insert a PAR36 bulb, add the glass lens, and screw on the brass cover.
- 4. Wire & Test:** Connect to a 12V transformer with waterproof connectors and test.

Quick Maintenance Tip

Because product is Solid Brass, it will naturally develop a beautiful patina over time. If you prefer the original Antique Bronze shine, you can use a brass cleaner, but avoid getting chemicals on the clear/frosted glass.
