Primary Use	Aesthetic/Durability Upgrade	New Installation / Core Base	Small-Scale Accent Upgrade

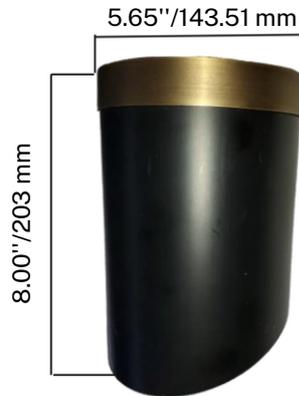

WELL LIGHT FIXTURES

QUICK INSTALL GUIDE

PRODUCT DIMENSION

INSTALLATION

- 1. Prepare Ground & Housing** Dig a hole larger than the housing (sold separately) and add gravel for drainage.
- 2. Align the Bevel Bottom** Place the housing in the ground, orienting the beveled/slanted base to your desired angle.
- 3. Install Lamp & Cover** Insert a bulb and secure the brass cover with your choice of clear or frosted lens.
- 4. Wire & Test** Connect to a 9–17V transformer using waterproof connectors, bury the wire 6" deep, and test.

Quick Maintenance Tip

Because product is Solid Brass, it will naturally develop a beautiful patina over time. If you prefer the original Antique Bronze shine, you can use a brass cleaner, but avoid getting chemicals on the clear/frosted glass.
